INTRODUCTION

This 1982 issue of Fire Losses in Ontario continues the new format introduced in the combined 1979 & 80 book.

With the new format, the category "firefighters" has been included in the fire casualty listing, and fire incidents.

The county listings are listed under the new numerical code which replaces the Alpha code of previous years.

The reason for this change, which was introduced in the last issue, is that it enables us to retrieve information much faster and easier.

This system is based on the Federal Government code which utilizes seven digits. However, only four digits are needed for coding purposes in this publication.

The first two digits indicate the County, Regional Municipality, and District. The last two digits represent the incorporated municipality.

For example "20" is the code for Metropolitan Toronto and "04" is the code for the City of Toronto. Discrepancies in section totals in this publication are due to a variance in the time periods of computer runs.

We hope you will appreciate that this edition brings you up-to-date on important statistics for 1982.

The 1983 edition promises to contain many new pertinent categories in a format which should produce expanded information in a more comprehensible context.

In this edition, a number of categories which appeared in previous years have been eliminated due to redundance. non relevance or failure of compliance with the new computer processing system.

County, Regional Municipality and District Codes

00	Federal & Indian Property	14	Northumberland	30	Waterloo R.M.	46	Haliburton
01	Glengarry	15	Peterborough	31	Perth	47	Renfrew

CHECK YOUR HOME FOR

FIRE HAZARDS

FACT: Seven out of 10 fires occur in the home.

Check the rooms of your home today. Make them safe for your family.

DO IT NOW!

KITCHEN

Remove pans of cooking fats and oils from the stove when not in use - it is easy to turn on the wrong burner. Unplug kettles, fry pans and other appliances when not in use. Do not hang wearing apparel above the stove to dry -they may fall on a burner. Keep matches out of the reach of children. Use only safety matches. Have an approved fire extinguisher handy for grease fires.

LIVINGROOM

Provide fire screens for fireplaces as flying brands or sparks can easily start a fire. Do not use extension cords in place of permanent wiring. Provide sufficient electrical outlets for your needs. Provide deep, substantial ash trays for smokers, and ensure that the contents are placed in a metal container or toilet each evening before retiring.

BEDROOM

Never smoke in bed. Many people are killed in fires as a result of bedding becoming ignited from a cigarette in the hands of a sleepy person.

BASEMENT & ATTIC

Remove all unnecessary combustibles from the basement and attic areas. If not removed they will add considerable fuel to a fire and make it easier for one to start. Have a service man check all furnace safety controls, the chimney and flue connections for leaks and clean the furnace at least once a year. Remove flammable liquids from the house. Remove oversized fuses. A 15-ampere fuse is required for regular domestic circuits and, if in doubt, consult a qualified electrician. Have your wiring checked periodically.

PLAN FOR FIRE

An hour of planning may save years of life. Make regular fire drills a family affair, a serious game but never scary.
Your home should have at least one smoke detector to make sure you wake up in time to escape.
Make sure every one knows the two ways out of each bedroom. Beware of stairs as they can become a chimney for smoke, hot gas and fire. Remember, nobody goes back for clothes, toys or pets.
A window is usually the alternate exit. Be sure the storms and screens can be removed easily from the inside.
If the window leads to a porch or garage roof -fine. If not, then a folding escape ladder can be provided. Adults can gently drop children out of second floor windows by lowering them by their arms.
Don't risk serious injury by jumping in panic from a high window. Stay in the room, close the door tightly. Open a window a little and sit on the floor to get fresh air. Hang out a sheet to show rescuers your location.
A hot door is a warning. Never open a door without checking it for heat, and look to see if smoke is leaking in around the edges. Keep all doors closed at night, particularly basement, kitchen and bedroom doors.
Get a neighbour to call the fire department, or after everyone is evacuated call on a neighbour's phone, or a fire department box. Speak slowly on the phone and give your address. Wait at the fire department box for the arrival of the fire fighters.

Consult your Fire Department... Follow their advice

A TIDY HOUSE SELDOM BURNS!

[redacted]

When purchasing electrical appliances and fixtures, look for the Canadian Standards Association seal of approval. This is your assurance that they have been tested for shock and fire hazards. The Ontario Hydro requires that CSA tested and listed electrical appliances and fixtures may be used in Ontario.

When purchasing fire extinguishers and fire alarm systems, look for the Underwriters' Laboratories of Canada label. This is your assurance that the equipment has been tested and will perform satisfactorily, provided it is used and/or installed in accordance with the listing specifications.

Gas-fired equipment which bears this seal, and is installed and operated in accordance with Canadian Gas Association instructions and Regulations under the Energy Act, will give safe reliable service.

The Energy Act requires that oil-fired equipment be labelled by one of the above testing laboratories.

MOST FIRE DEATHS
HAPPEN IN THE HOME ...

GET OUT SAFELY

WHEN FIRE STRIKES

GET OUT and STAY OUT

RAISE THE ALARM. When you detect fire or smoke shout to warn the other occupants. Children and older people will need help. Don't wait to get dressed, shoes and one blanket per person will suffice - even in cold weather. Have a neighbour call the fire department after all are out. Never waste time trying to extinguish anything other than a very small fire.

A HOT DOOR is a warning. Never open a door without first checking it for heat. If it is warm, leave it closed and go out a window. If this is impossible wait by an open window or on a balcony for rescue. Place bedding at door cracks to keep smoke out.

HEAT AND DEADLY GASES are the main killers. Even a small fire is dangerous. The open interior stairs in the single family home may become a chimney allowing heat and smoke to rise to highest floor level. If you cannot leave an upper room by a window, close the door and wait by the open window for rescue.

TELL THE FIRE FIGHTERS if anyone remains in the building. Leave rescue operations to them, unless you can safely raise a ladder or help anyone down from a window or roof before help arrives.

NEVER GO BACK into a burning building for any reason whatsoever. Many lives are lost through the deadly effects of fumes, even from small fires. Never risk a life in an attempt to save personal possessions.

REMEMBER:

An hour of pre-planning may save years of life. Make regular fire drills a family affair.

A smoke alarm on each level of your house will provide early warning of fire.

Hot gases rise. The cleanest, coolest air is near the floor.

To break a window, use a chair or other heavy object, shielding the face against splinters. Remove jagged pieces from the frame.

A closed door provides some protection against fire or fumes. Keep basement or utility room doors closed at all times, and close all doors at bedtime.

Keep the fire department number near your phone, and memorize it. If you phone in an alarm, give your address first, in case your call is interrupted.

Check your home for fire hazards, and eliminate them as you find them.

Your fire department will be glad to advise you on any question of fire safety for your home.

CONSULT YOUR FIRE DEPARTMENT FOLLOW THEIR ADVICE...

MOST FIRE DEATHS HAPPEN IN THE HOME!

Wherever you are

... at home or away ... always be on guard against fire. In theatres, hotels or other unfamiliar buildings, find the fire exits after you enter. In industrial or office buildings, familiarize yourself with exit routes and evacuation procedures. If you live or work in a highrise building, fire resistive construction and enclosed stairways contribute to your safety, but you must plan ahead. When fire breaks out, it may be too late to learn your escape route.

Always feel every door for heat before opening it in time of fire. If trapped on an upper floor, shout for help or sound the alarm. Wait for help behind closed doors. If there is a balcony, wait there, closing the door behind you.

Remember that your first thought should be for your own safety, and the safety of those who need your help, but leave fire fighting and rescue to the trained men of the fire department.

Experience and research have found that it is desirable to have a smoke alarm on each level of your home. The basement alarm is preferably located on the ceiling near the stairs, not in the stairwell.

For performance and reliability, be sure the smoke alarms are labelled by Underwriters' Laboratories of Canada. Follow the manufacturer's instructions for mounting these devices.
